Sounds Like Standard Headphones – Without Ear Stuffing

HAKII MIXV Smart Bluetooth Visor Headphones deliver sound using Directional Sound technology. The sound will be transmitted to ears via air as other headphones did, but with patented abTube™ technology, the spreading of sound will be limited, and only the user will be able to hear the sound as loud as a medium volume within 1 meter (3.28 feet) of range outdoors. By using Directional Sound, HAKII MIXV Smart Bluetooth Visor Headphones provide the same, or even better listening experience as standard headphones, without covering your ears, or causing unnatural vibration as bone conduction earphones do.

Uncompromised Sound Quality

While the powerful 22mm speaker drivers of HAKII MIXV Smart Visor Headphones deliver natural and high-definition multi-frequency audio performance, the customized Liso™ algorithm automatically analyzes the current environment and optimizes sound quality configuration accordingly.

Clear Conversation

HAKII Mix Smart Headband Headphones are equipped with 2 microphones, which reduce phone call noises with beam-forming array technology. Use the simple 3-button design to control phone calls, music, or Siri or other AI assistants.

Stay Aware of Your Surroundings

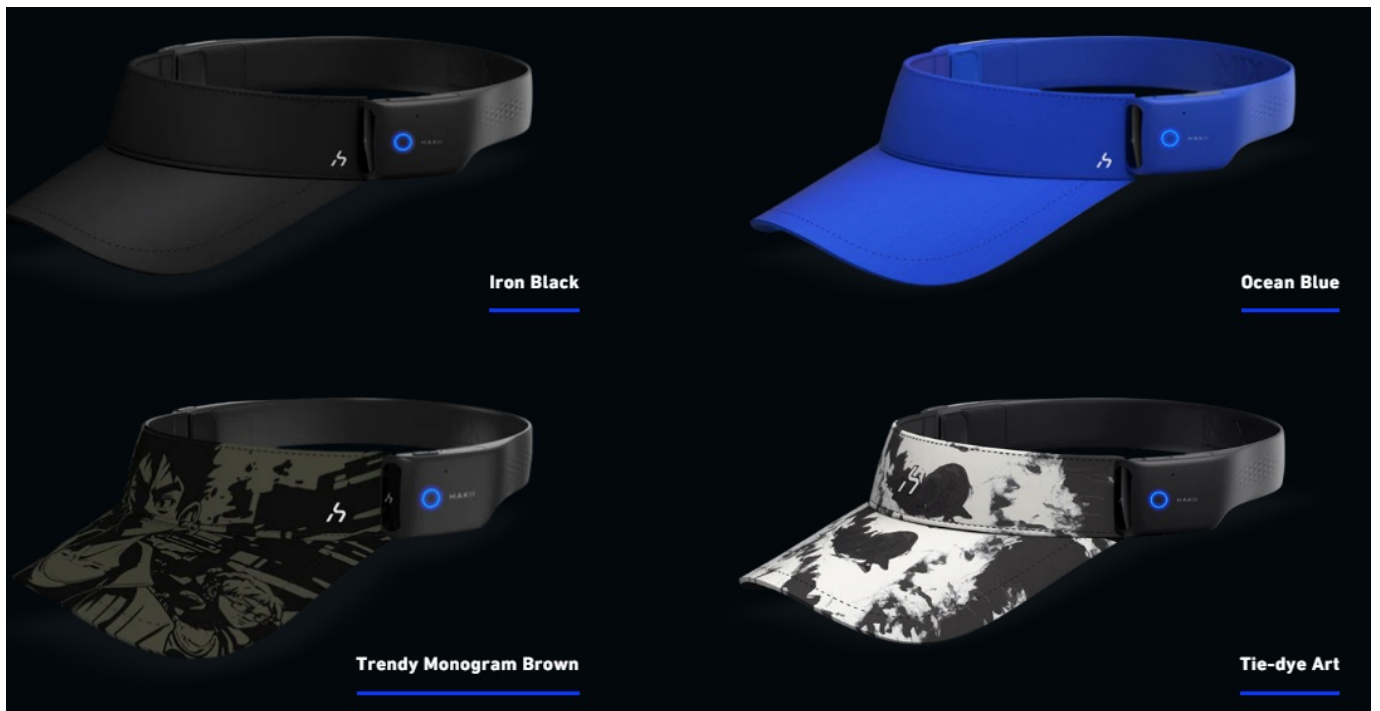

With an Open-Ear design, the HAKII MIXV Smart Visor Headphones allow you to hear your surroundings while listening to music, protecting you from outdoor dangers like traffic or animals while running, skateboarding, or doing other outdoor activities.

A Visor That Goes Beyond

With an innovative visor design, HAKII MIXV Smart Visor Headphones not only can provide exchangeable brim options for your customization and aesthetic needs, they also provide powerful sun protection to protect you from strong sunlight during outdoor activities.

Personalization Options (More Coming Soon)

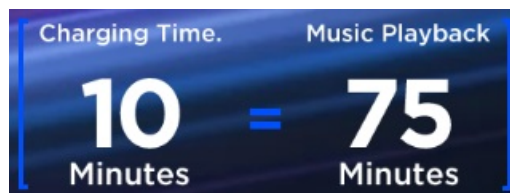

Never-Fall Design

With the secure headband design, you no longer need to worry about earbuds falling out. Possibly the most secure-fitting headphones on the market, the HAKII MIXV visor headphones help you take on any intensive activities.

Marathon-level Playback Time

With up to 8 hours of listening time, HAKII MIXV will be powerful enough for even a full marathon. It takes only 1.5-2 hours to fully charge the device with a USB Type-C charging port.

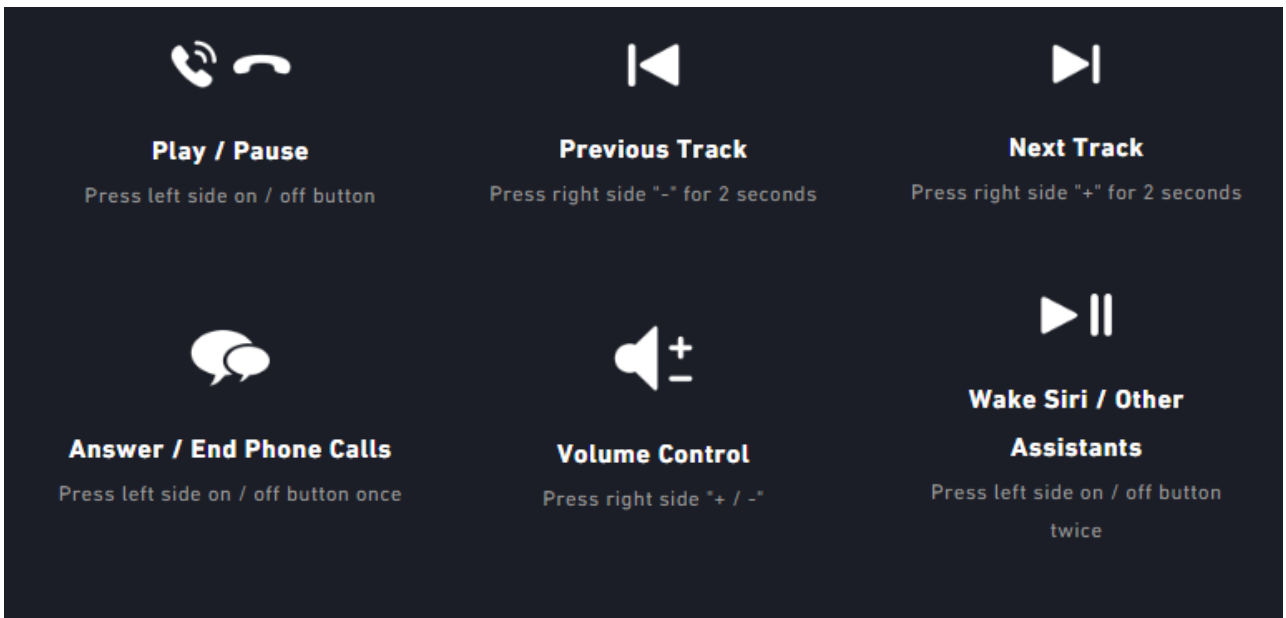

IPX5 Water Resistant

Built to withstand splashes, sweat, and rain, perfect for outdoor.

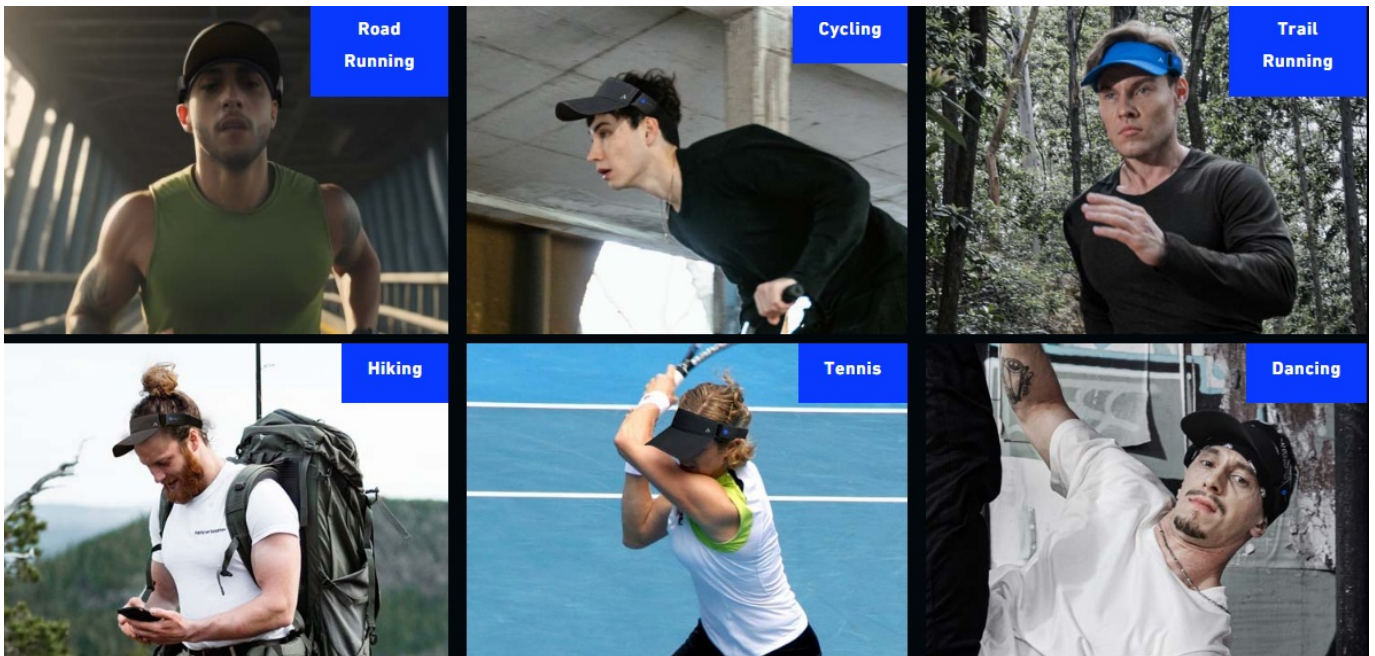

Instant Connection & Binaural Low-Latency

Bluetooth 5.3 running core with lower latency and continuous connection. With the help of the latest Bluetooth 5.3 technology, these smart visor headphones provide stable and fast connectivity and low latency listening experience.
